Some of the products presented are Class IIb Medical Devices bearing the CE marking manufactured by GlobalD for healthcare professionals in orthodontics. They are used for bone fixation in orthodontics to reposition one or more teeth.

The CE conformity assessment was carried out by a notified body (CE0459) for Class IIb medical devices. In France, these medical devices are not subject to the Social Security reimbursement scheme. Please consult the instructions for use before use. The instruction manuals are digital. A QR code and URL link are provided on the device label. Paper manuals are nevertheless available on request at the following address: quality@globald.com at no additional cost within 7 days.

All devices are available for export subject to obtaining the approvals in force in the countries concerned. If you have any questions or require further information, please contact Global D's sales department.

The bone-anchored distractor shown is a custom-made medical device manufactured by One Ortho, which complies with the general safety and performance requirements set out in Annex I of Regulation (EU) 2017/745 and is distributed by Global D.
